

# **TECHNIQUES FOR MAPPING GRAPHICAL USER INTERFACES OF APPLICATIONS**

5

## **ABSTRACT**

Techniques for generating maps of graphical user interfaces of applications are provided. An application mapper programmatically executes an application to generate a map of the graphical user interface of the application. The map can include windows, graphical user interface objects, actions, shortcuts, and transitions. The map can be utilized by a script generator to generate scripts that include instructions to test the application.
